Native views, shared experience.

A small field guide to NativeChannels

SWIFT

PDFKit renders this document on Apple platforms.

KOTLIN

PdfRenderer paints each page on Android.

C#

MAUI controls navigation through a private channel.

One view.
Its own channel.

Commands go out. Native state comes back.

OPEN

Load a local file without sending PDF bytes as JSON.

NAVIGATE

Jump to a page or set a zoom factor from C#.

OBSERVE

Native gestures report page and zoom changes.

Built to disconnect safely.

Documents have a lifetime, just like views.

ISOLATE

Two viewers keep independent documents and state.

DETACH

Release observers, bitmaps and document handles.

RECONNECT

Create a fresh view and reopen the document.
